After cooling of the product and pail, the pail regains its original stacking strength. Microwave Safe			
Cold Temperatures	The standard resin material for white/coloured products resists temperatures down to -20° C. Deep freezing below - 20° C may require a special resin available on request. Standard transparent (CLX) products might become brittle at temperatures below 0° C, and special resins are available on request for applications below freezing. Resins tailored for freezing stability has a lower stackability than standard resin which must betaken into consideration.
